

## Information Sheet Band Course

### Information Thorverton Stone requires to manufacture Band Course

The metre run.

Height and depth.

Design – if you wish to design your own, please send us detailed drawings in advance to allow time for the mould to be manufactured.

### Useful Information

Band course is a band of stone used to enhance the appearance of a building. It may be of a very plain design such as a flat stone, or a more intricate one as shown in the photograph above.

The right hand photo above actually shows two types of band course. The top one, under the soffit, is known as 'Dentil Band Course', with the lower one being a design requested by the customer.
