<p>Arched Lintel - standard sections as per lintels</p> 	<p>Arch - standard sections as per lintels</p> 

Information Thorverton Stone requires to manufacture a Lintel

We need to know the section, the total length and the design that you require. If you would like a chamfer over the opening of the window, we would need to know the preferred length of the chamfer too.

For keystone lintels, the keystone is integral to the lintel and is typically the size shown above. However, other sizes will be made on request.

Useful Information

All our lintels are steel reinforced. Please use an independent engineer to verify the load bearing capability before building.

Our splayed end lintels are usually made to have a 50mm bearing each end on the bottom edge. If you prefer them to be made flush with the window opening, please ask.

A drip groove is cast in as standard.

Should the typical sections shown above not suffice, we will make the lintels to your specifications on request.
