Ball Diameter - 225 or 300mm

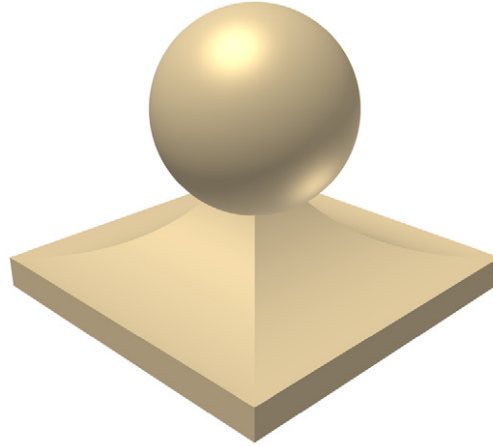

Classic Pier Cap

Moulded Pier Cap

Information Sheet Pier Caps

Swept Pier Cap with Ballfinial
(See red stone version in brochure)

Information Thorverton Stone requires to manufacture a Pier Cap

Tell us the size of your pier and we will make a pier cap to fit.

Ballfinial size (if required). We make 225mm, 300mm, 400mm and a 450mm diameter ballfinials.

Useful Information

A pier cap will overhang your pier by approximately 30mm on all sides at the bottom edge. The overall overhang may be considerably greater than this, depending on the style of pier cap ordered.

Do remember that the opening width (gap) between your gate piers will reduce due to the overhang on each pier cap. This could be up to 150mm on each gate pier (up to one foot overall).

Our pier caps come with a drip groove cast in as standard.

A ballfinial, lamp or other top mounted item may be attached to any of our pier cap designs, please discuss the options with us before ordering.

If you require a hole for cabling, please let us know before ordering.

We will endeavour to replicate an existing design if you wish, please ask for assistance.

Lifting sockets will be cast in to large pier caps as standard and a mix to fill the resultant hole is supplied.
